SPECIALTY

ARCHITECTURE

Architecture is the art and science of creating buildings, cities and landscapes. Architects play an important role in shaping the environment by creating spaces that inspire, unite and serve humanity. Undergraduates learn to design and build structures that combine functionality, aesthetics and sustainability.

EDUCATIONAL PROGRAMME

// Formation of the architectural environment
// History, theory and practice of spatial arts
// Architectural graphics
// Architectural design
// Architectural and landscape design
// Architectural and urban planning design
// Architectural ergonomics
// Painting
// Drawing
// Design of production facilities
// Urban planning and territorial planning
// Architectural physics
// Sculpture and layout
// Universal design of architectural objects
// Design of complex facilities
// Computer science and computer engineering
// Engineering structures and mechanics
// Reconstruction of architectural and urban planning facilities
// Interior and object design
// Current problems of architecture, urban planning and design of the architectural environment
// Scientific and design research in architectural and design activities

PROFESSIONAL COMPETENCIES

// Apply methods of descriptive geometry and spatial modeling
// Create architectural projects according to structural and technical requirements and initiate innovative design solutions
// Concepts of acoustics, lighting engineering, climatology
// Research methods and criteria for evaluating temperature and humidity, acoustic and light qualities of the environment in design solutions
// Optimization of the architectural environment, solving environmental problems of urban planning and landscape architecture
// Knowledge of modern building materials, their properties and production technologies
// Knowledge of the patterns of pictorial image formation, the basics of color and color composition, the laws of image and expressive means of painting
// Professional level of architectural and design solutions
// Concepts of three-dimensional composition using layout methods
// Sculpture objects in an architectural context
// Competitiveness and economic efficiency of the developed architectural and design solutions
// Knowledge of the requirements for the engineering equipment of residential and public buildings
// Features of calculation and application of building engineering structures of various types
// Modern methods of compositional and spatial organization of urban formations, formation of the appearance and artistic image of cities
// Modern materials, structures, technologies in the development of architectural solutions
// Development of design solutions

CAREER PROSPECTS

// Architectural bureaus
// Construction companies
// Architectural and construction organizations
// Design institutes
// Departments of construction, architecture and landscaping
// Design studios and bureaus
// Organizations for the protection and restoration of architectural monuments
// Companies engaged in construction expertise
// Education

SPECIALTY

CONSTRUCTION BUILDING AND STRUCTURES

Extensive knowledge in the field of design, construction and operation of real estate. Modern technologies of building construction, methods of construction project management, principles of investment processes organization in construction. Additional knowledge and skills in the field of attracting investments, risk analysis and decision-making in the implementation of investment projects in construction.

EDUCATIONAL PROGRAMME

// Engineering geology and geodesy
// Building materials science
// Electrical engineering
// Resistance of materials
// Construction mechanics
// Architecture
// Technology of construction production
// Organization and management in construction
// Mechanization, automation, engineering lines and technical operation
// Engineering lines and equipment
// Soil mechanics and foundations
// Engineering of construction, reconstruction and operation of buildings and structures
// Information modeling of buildings and structures
// Building and metal structures
// Reinforced concrete and stone structures
// Economics of construction
// Engineering of reconstruction and operation of buildings and structures
// Innovative building materials and technologies

PROFESSIONAL COMPETENCIES

// Software tools for solving engineering problems
// Rules and methods of performing geodetic measurements in construction
// Laws of kinematics and dynamics
// Laws of electrical engineering
// Methods and approaches in the field of construction technologies, structures and materials
// Methods for calculating the strength and deformation characteristics of building materials, parts, products and structures
// Laws of fluid mechanics in engineering calculations
// Calculations of building structures and their elements for strength, stability and rigidity
// Principles of automated control of production processes and basic equipment on the construction site
// Methods, equipment and technologies for the construction of buildings and structures
// Knowledge on the design of power and heat supply systems, water supply and water disposal systems
// Analysis of the physical and mechanical properties of soils for the correct choice of the foundation structure
// Technologies for the construction of high-rise buildings and special structures
// Building reconstruction technologies
// Software tools for automating the development of technological and design documentation in construction
// Innovative directions of development of building materials and technologies
// Methods of business organization

CAREER PROSPECTS

// Construction and development companies leading the construction of infrastructure projects
// Real estate companies
// Design bureaus
// Construction organizations

GRAPHIC AND MULTIMEDIA DESIGN

DESIGNER
Qualification given

BACHELOR
Degree

OF CIVIL ENGINEERING
Faculty

OF ARCHITECTURE AND DESIGN
Department

FULL-TIME
4 YEARS
Study period

The world of creativity and digital technologies. Creating visual images that capture the imagination and convey ideas. Here, students are taught not only to draw, but also to use modern tools to create graphic elements, animations and interactive interfaces. A specialty for those who want to make the world brighter and more interesting using design and modern technology.

EDUCATIONAL PROGRAMME

// Composition
// Color science and coloristics
// Typography
// Photography
// Computer technologies (vector and raster editors, layout programs)
// Academic drawing
// Graphic design
// Applied and printed graphics
// Graphic design in multimedia
// Multimedia design
// Creative concepts in design
// Digital painting
// Information graphics / Motion design
// Game design
// Modern art practices

PROFESSIONAL COMPETENCIES

// Artistic and expressive coloristic solution of the design object
// Methods of building typefaces, using typographic tools and techniques
// Methods of technically competent photography and digital image processing
// Methods of using vector and raster editors, layout programs, 3D modeling and visualization
// Principles and technologies of pre-project research
// Principles of design projects creation
// Conceptual solutions for modern design practices
// Methods and means of shaping in design
// Laws of perspective and basic graphic design skills

psu.by/en/

CAREER PROSPECTS

// Advertising agencies
// Architectural bureaus
// Printing design studios
// Marketing agencies
// Large companies and brands
// Web studios
// Design studios and bureaus
// Game studios
// Telecommunications companies
// Freelance
// Education
// IT-companies
// Publishing houses and media companies
// Museums and art galleries

SPECIALITY

OBJECT-SPATIAL ENVIRONMENT DESIGN

A creative and technical specialty, where qualified specialists are trained to work on projects for the design of the interior space of residential and public buildings. Shapes, textures and colors – every object and every corner of the space become an object for creativity. Students are taught to combine functionality and aesthetics.

EDUCATIONAL PROGRAMME

// Color science and coloristics
// Composition
// Academic drawing and painting
// Font
// Perspective
// Descriptive geometry
// Design basics
// Project graphics
// Layout design
// Plastic anatomy
// Design projects
// Style formation
// Ergonomics
// Computer technologies in design
// Structures of buildings and constructions
// Construction
// Marketing and advertising
// Techniques in interior design
// Creative concepts in design

PROFESSIONAL COMPETENCIES

// Authentic image from nature, from memory and representation
// Knowledge of the plastic anatomy of the human body in artistic practice
// Knowledge of color theory and principles of building color harmonies
// Knowledge of the laws of creating a planar and three-dimensional composition
// Knowledge of design technology, development of design projects of various artificial interior design systems
// Development of original creative interior design concepts концепций дизайна интерьера
// Specialized technologies and tools for solving design problems of interior design
// Software tools for three-dimensional modeling, visualization and computer animation
// Design engineering
// Knowledge of the basics of font graphics
// Editors of computer 2D and 2D graphics
// Basics of marketing and advertising
// Graphical methods of information transmission
// Laws of perspective and graphic design skills

CAREER PROSPECTS

// Architectural bureaus
// Construction companies
// Architectural and construction organisation
// Large companies and brands
// Design studios and bureaus
// Education
// Freelance
// Museums and art galleries
// Furniture salons, studios, shops and factories

SPECIALTY

REAL ESTATE EXPERTISE AND MANAGEMENT

Knowledge of the technical, economic and legal aspects of real estate management. The real estate expert and management engineer is engaged in valuation and analysis of real estate, conducting technical examinations, developing strategies for the use and optimization of real estate, as well as advising clients on real estate issues.

EDUCATIONAL PROGRAMME

// Materials science
// Engineering geology
// Theoretical mechanics
// Engineering geodesy
// Architecture
// Construction mechanics
// Engineering lines and equipment
// Resistance of materials
// Property management
// Economics of construction
// Technology of construction production
// Organization and management in construction and real estate
// Real estate activity
// Examination and inspection of real estate
// Real estate valuation
// Real Estate economics
// Project management
// Business valuation
// Project management

PROFESSIONAL COMPETENCIES

// Methods and approaches in the field of technologies, materials and structures for solving engineering and construction tasks
// Software tools for solving engineering problems
// Calculations of building structures and their elements for strength, stability and rigidity
// Real estate management, its registration, valuation of real estate objects
// Methods of inspection and examination of buildings and structures
// Assessment of environmental and energy sustainability of materials, technologies and industries
// Analysis of geological processes
// Methods of valuation of real estate, land cadastre
// Laws of kinematics and dynamics for performing engineering calculations
// Rules and methods of performing geodetic measurements in construction
// Methods for calculating the strength and deformative characteristics of building materials, parts, products and structures
// Real estate market analysis
// Real estate management laws
// Assessment of the state of physical and mechanical properties of soils
// Technologies of repair and restoration building structures

CAREER PROSPECTS

// Real estate agencies that rent, sell; and invest in real estate
// Real estate companies
// Design bureaus
// Construction organizations

SPECIALTY

UTILITY NETWORKS, EQUIPMENT OF BUILDINGS AND STRUCTURES

Specialty is aimed at training specialists involved in the design, construction and operation of water supply and sewerage systems. The details of creating sustainable water supply systems, innovative methods of water purification and restoration.

EDUCATIONAL PROGRAMME

// Theoretical mechanics
// Engineering geodesy, geodetic practice
// Information technologies
// Building materials science
// Resistance of materials
// Construction mechanics
// Mechanics of liquid and gas
// Architecture and building structures
// Electrical engineering and electrical equipment
// Metrology, standardization and certification
// Engineering geology and hydrogeology, soil mechanics, foundations
// Heat and gas supply and ventilation
// Water supply and water disposal systems
// Water supply lines
// Pumps and blower stations
// Wastewater treatment technology
// Water intake facilities
// Water supply for industrial enterprises
// Equipment and technology of construction and installation works
// Fundamentals of innovation in the design and construction of water supply and water disposal systems

PROFESSIONAL COMPETENCIES

// Modern methods and approaches in the field of construction technologies, structures and materials
// Knowledge of the main types of building materials and structures
// Laws of electrical engineering
// Ecological and energy safety of production processes
// Design of water disposal lines
// Design of a drainage network
// Complexes of engineering and geodetic works in the design, construction and operation of engineering facilities
// Knowledge of the types of structures and individual elements of wastewater disposal and wastewater treatment systems
// Knowledge of geodetic support
// Laws, concepts and theories of inorganic and organic chemistry
// Knowledge about geological processes
// Methods of performing hydrometric measurements and observations
// Calculation methods for pumping and blower equipment
// Design, construction and operation of engineering and technical equipment of buildings and structures
// Analysis of the operation of water supply and water disposal systems
// Methods of technical and production maintenance of facilities, structures, installations, equipment

CAREER PROSPECTS

// Housing and utilities services
// Water management services
// Project organizations
// Research institutes, secondary and higher educational institutions
// Construction organizations
// Enterprises producing construction materials
// Organizational and managerial departments of any direction
// Environmental services

SPECIALTY

UTILITY NETWORKS, EQUIPMENT OF BUILDINGS AND STRUCTURES

Here, specialists are trained, who are engaged in the design, installation and maintenance of heating, ventilation, air conditioning systems, as well as indoor air purification and treatment systems. They are also engaged in protecting indoor air quality, preventing pollution and providing comfortable living and working conditions for people.

EDUCATIONAL PROGRAMME

// Engineering geodesy
// Information technologies
// Building materials science
// Mechanics of liquid and gas
// Technical thermodynamics
// Architecture and building structures
// Construction thermophysics
// Electrical engineering and electrical equipment
// Pumps, fans and compressors
// Environmental engineering

3D TECHNOLOGY FOR PRODUCT MANUFACTURING

The specialist knows how to work with various materials and create unique products from them. They work with machines and equipment that are used to production. Students are trained to create unique and functional products using advanced methods and technologies of three-dimensional modeling

EDUCATIONAL PROGRAMME

// Computer science and computer graphics
// Materials science
// General and inorganic chemistry
// Technology and equipment
// Operations of mechanical assembly processes
// Cutting theory and cutting tools
// Theory of mechanisms and machines
// Materials of additive synthesis
// Modeling and construction
// Technology and equipment
// Thermodynamics and heat transfer
// Mechanics and design
// Materials science
// Economics and organization of production
// Technological equipment of production
// Computer modeling and engineering analysis
// Mechatronics and basics of programming
// Industrial ecology
// Processing machines with software control

PROFESSIONAL COMPETENCIES

// Concepts and laws of physics, principles of experimental and theoretical study of physical phenomena and processes
// Positions of kinematics and dynamics
// Structural materials and shapes of structural elements, design schemes, calculations of technical structures and their elements for strength, stability, rigidity
// Creation and operation of machines and systems with computer motion control
// Interaction of the industrial system with the environment
// Use of mechanics methods of materials of additive synthesis, features of the structure and mechanical behavior of materials of additive synthesis in the development of shaping processes and forecasting the properties of materials
// Product design
// Technological processes of additive synthesis
// Calculation and design of equipment and special technological equipment for three-dimensional technologies

CAREER PROSPECTS

// Enterprises and organizations of various industries where machines are designed and technologies for manufacturing parts are being developed
// Design bureaus
// Educational and scientific institutions
// Enterprises of computer modeling and design of machines, automated development of technological processes for manufacturing products

SPECIALTY

MECHANICAL ENGINEERING TECHNOLOGY, METALL-CUTTING MACHINES AND TOOLS

Specialists know everything about the production of machinery and equipment, how to work with metall and create various parts and mechanisms from it. The art of converting raw material into exquisite details, with the help of skillful machine movements and precise tools

EDUCATIONAL PROGRAMME

// Design and calculations of the strength of parts and machines
// Modeling of mechanical systems
// Design, calculation of machine parts and mechanisms
// Engineering graphics
// Development of technological processes in mechanical engineering
// Fundamentals of engineering in mechanical engineering
// Environmental and energy sustainability of production
// Design and calculations of the strength of parts and machines
// Theoretical mechanics
// Cutting theory, metall-cutting machines and tools
// Information technologies
// Hydraulic and pneumatic motor controller, hydraulic and pneumatic automation
// Metall-cutting machines
// Economics and organization of a machine-building enterprise
// Machine tool design and calculation
// Mechanical engineering technology
// Methods of optimization of technological processes
// Technological bases of ion-plasma

PROFESSIONAL COMPETENCIES

// Calculations of technical structures and their elements for strength, stability, rigidity
// Analysis of kinematic schemes of mechanisms and machines
// Application and operation of hydraulic machines and industrial hydraulic motor controller in modern production
// Calculation and rational design of machines and their structural elements
// Technological, energy, kinematic, structural and strength calculations of technological equipment
// Analysis of the effects on the materials properties in production and operation conditions
// Design of machines and apparatuses taking into account their technological purpose
// Technological schemes and equipment of chemical production
// Skills of operation and repair of technological equipment
// Skills and abilities of designing, calculating and operating lifting, transporting and loading and unloading machines
// Skills of mathematical modeling and optimization of technological processes
// Economic indicators of the production and economic activity of the enterprise
// Processes and devices of chemical technology

CAREER PROSPECTS

// Enterprises and organizations of various industries where machines are designed and technologies for manufacturing parts are being developed
// Educational and scientific institutions
// Enterprises of computer modeling and design of machines, automated development of technological processes for manufacturing products
// Design bureaus

SPECIALTY

OIL REFINING, GAS PROCESSING AND INDUSTRIAL ORGANIC SYNTHESIS

This specialty allows students to gain in-depth knowledge and practical skills in the field of oil and gas and petrochemical industry, and become highly qualified specialists in this field. It is the art of transforming natural resources into innovative solutions, where each molecule plays its role in the harmonious synthesis of production and ecology.

EDUCATIONAL PROGRAMME

// Physics and mathematics module
// Organic and inorganic chemistry
// General engineering module
// Modeling and design of oil refineries
// Applied mechanics
// Processes and devices of chemical technology
// Equipment for oil refineries and petrochemical enterprises
// Oil and gas refining technology
// Information technologies in oil refining processes
// Energy management and quality management
// Electrical engineering, automation and automation of chemical production
// Safe operation of oil refining and petrochemical industries
// Industrial ecology
// Labor protection

PROFESSIONAL COMPETENCIES

// Engineering methods for calculating machine parts and assemblies to ensure the reliability of production equipment
// Knowledge of the structure, reactivity and properties of chemical elements and their inorganic compounds
// Principles and methods of chemical processing of raw materials
// Methods of protecting the population from the influence of negative factors of anthropogenic, man-made and natural origin
// Modeling of physical and chemical processes
// Methods for assessing the quality and properties of oil, gas and their refined products
// Solving problems of designing technological processes of oil and gas refining using automated systems
// Energy indicators and explosion hazard categories of technological facilities for oil and gas refining
// Economic efficiency of used and promising technologies and equipment

CAREER PROSPECTS

// Oil and gas processing enterprises
// Petrochemical enterprises
// Chemical plants
// Academic, research and design institutes
// Enterprises specializing in the processing, transportation, compounding, storage of gas, oil and petroleum products

An exciting journey into the world of technology and innovation. Students will immerse themselves in the world of electric and autonomous vehicles. Principles of operation of electric motors, batteries and control systems. Experiments, data analysis and development of a solution to improve the performance and efficiency of electric and autonomous vehicles

EDUCATIONAL PROGRAMME

// General engineering training
// Theory of machines and mechanisms
// Automation and information technology
// Materials science
// Mechanics of materials
// Thermodynamics and mechanics of areas
// Construction of electric and autonomous vehicles
// Electrical equipment and power electronics of electric and autonomous vehicles
// Design and manufacture of vehicles

SPECIALTY

PIPELINE TRANSPORT, OIL AND GAS STORAGE

Currently, the oil and gas pipeline is the most economical and environmentally sustainable mean of transporting oil and gas. It enables the efficient delivery of oil to refineries, natural gas to residential and industrial consumers, and petroleum products to fuel stations.
In the Republic of Belarus, the training of engineers in Pipeline Transport, Oil and Gas Storage is carried out only at Euphrosyne Polotskaya State University of Polotsk.
For the oil and gas industry, graduates of this specialty are exceptional and valuable experts.

EDUCATIONAL PROGRAMME

// Interchangeability, standardization, and technical measurements
// Soil mechanics
// Strength of materials
// Materials science and technology of pipeline materials
// Pipeline welding
// Electrical engineering and electric drive
// Technical hydromechanics
// Thermal engineering
// Machines and equipment for oil and gas pipelines
// Information technologies in pipeline transportation
// Gas turbine installations
// Design and operation of oil depots and oil storage facilities
// Pipeline transportation of oil and petroleum products
// Oil and gas supply systems
// Construction of pipeline transportation facilities
// Pipeline transportation and storage of gas
// Systems for electrochemical protection of facilities in pipeline transportation
// Construction of pipeline transportation facilities in special conditions
// Technical diagnostics

PROFESSIONAL COMPETENCIES

// Knowledge of natural science disciplines to address practical challenges in the transportation and storage of oil and gas
// Calculations and analysis of the terrain features, welding techniques, and electrical engineering components in the construction of structures for oil and gas pipeline transportation
// Calculations and analysis of materials, machines, and mechanisms, taking into account soil characteristics when constructing facilities for oil and gas pipeline transportation
// Environmental safety in the transportation of oil and gas, as well as the consequences of technological and natural accidents at facilities of the main pipeline transportation system

CAREER PROSPECTS

The largest oil and gas companies in the world:
// Sinopec (People's republic of China)
// PetroChina (People's republic of China)
// Saudi Aramco (Kingdom of Saudi)
// ExxonMobil (United States of America)
// Shell (United Kingdom of Great Britain and Northern Ireland)
// TotalEnergies (French Republic)
// BP (United Kingdom of Great Britain and Northern Ireland)
// Chevron Corporation (United States of America)
// Gazprom (Russian Federation)
// Lukoil (Russian Federation)

ARTIFICIAL INTELLIGENCE

COMPUTER ENGINEERING

GEODESY

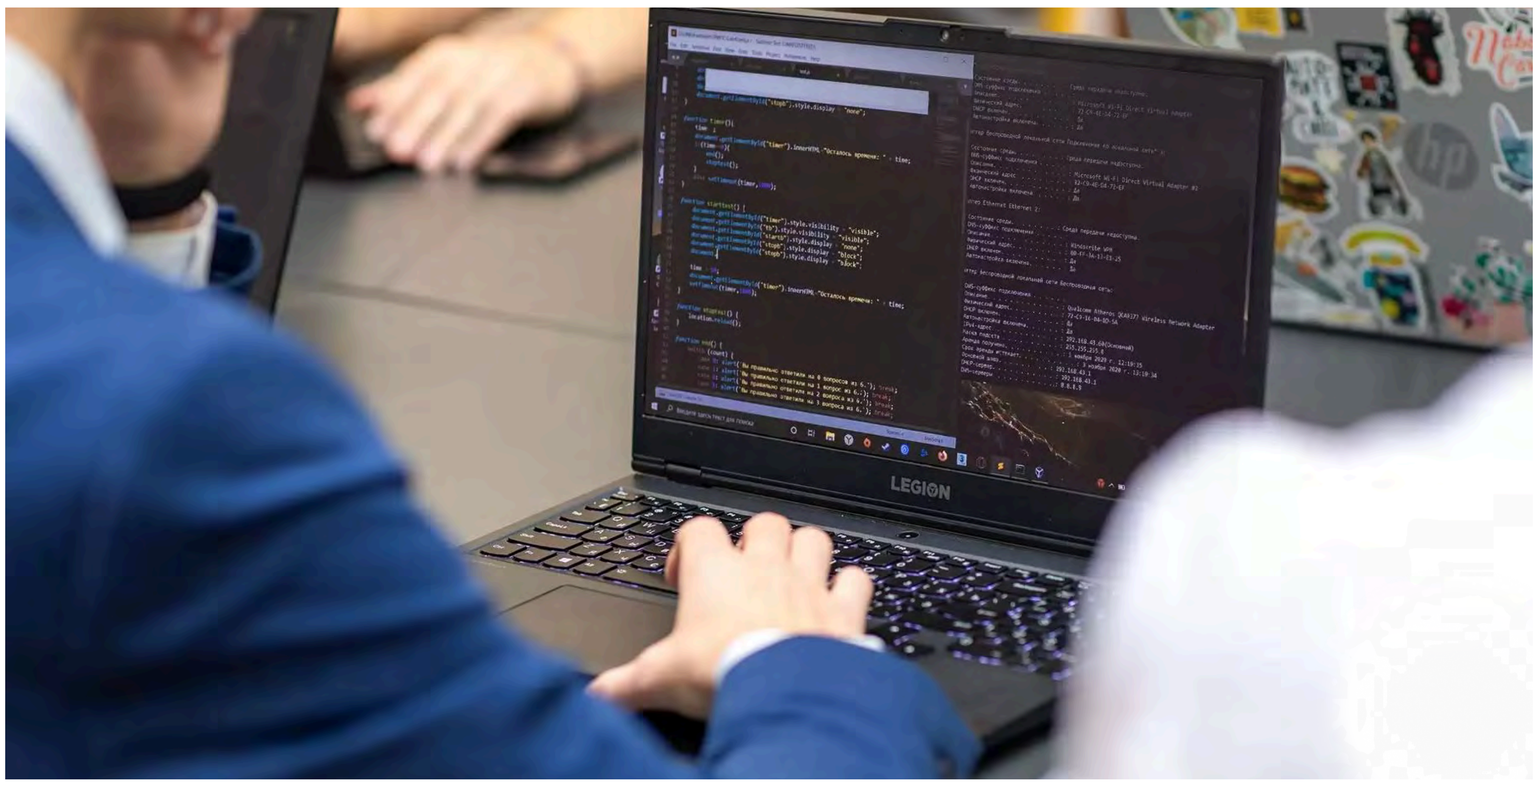

INFORMATION SYSTEMS AND TECHNOLOGIES

SOFTWARE ENGINEERING

FACULTY
OF INFORMATION
TECHNOLOGIES

SPECIALTY

ARTIFICIAL INTELLIGENCE

Students are trained in the development and application of technologies, methods and algorithms that allow computer systems to simulate human intelligence. Machine learning, neural networks, natural language processing, computer vision and other related fields.

EDUCATIONAL PROGRAMME

// Representation and processing of information in intelligent systems
// Operating systems and system programming
// Software design of intelligent systems
// Software development technologies
// Hardware for intelligent systems
// Programming languages and technologies
// Problem solving models in intelligent systems
// Algorithms and data structures
// Graphical interface of intelligent systems
// Natural language interface of intelligent systems
// Computer systems and networks
// Databases
// Means and methods of information protection in intelligent systems
// Cryptographic methods of information protection
// Modern programming platforms

PROFESSIONAL COMPETENCIES

// Knowledge of mathematical, system-wide and hardware principles of the organization of intelligent systems in their design and implementation
// Tools for building intelligent problem solvers and their components
// Principles of construction and functioning of graphical interfaces of intelligent systems
// Models and methods of information processing
// System software design
// Implementation of web applications
// Designing modern software for computer networks
// Creation of information databases for information support of software complexes and systems
// Designing secure intelligent information systems
// Use of semantic languages, methods and means of presenting and processing information and meta-information on the Internet

CAREER PROSPECTS

// Departments for the development of information retrieval systems, intelligent interfaces, medical diagnostics, expert systems, information security, business process reengineering, office management and document management of design, research and educational organizations
// Enterprises and organizations that produce and operate computer equipment, computer systems and networks, software

COMPUTERS, SYSTEMS AND NETWORKS
Specialization

ENGINEER-SYSTEM DESIGNER
Qualification given

BACHELOR
Degree

OF INFORMATION TECHNOLOGIES
Faculty

OF COMPUTING SYSTEMS AND NETWORKS
Department

FULL-TIME 4 YEARS
Study period

This specialty teaches students in the field design, development, management and maintenance of computer systems, networks and software. Students study information processing technologies, computer hardware and software, as well as network technologies and information security methods.

EDUCATIONAL PROGRAMME

// Algorithmization and programming
// Engineering computer graphics
// Programming in high-level languages
// Assembly language programming
// Circuit design
// Cross-platform programming
// Software testing
// Interfaces and devices of computing machines
// Computer network administration
// Programming of mobile systems
// Software development technologies
// Programming for the Internet
// Databases
// System analysis
// Modeling
// Digital signal and image processing
// Network system software
// Architecture of mobile platforms

PROFESSIONAL COMPETENCIES

// Programming methods and tools
// Creating computer programs using assembler
// Programming of digital computing devices and systems
// Calculation of electrical circuits
// Computer network administration
// System software design
// Creating programs using functional programming languages
// Application development for mobile systems using mobile technologies
// Development of system and application software using a cross-platform approach
// Software testing
// Knowledge of web application development technology
// Creating network software

CAREER PROSPECTS

// System administration
// Application programming
// System programming
// Mobile and Web programming
// Database development
// Development of software and hardware complexes and their components
// Software testing

SPECIALTY

COMPUTER ENGINEERING

A specialist develops software for mobile devices. Programming languages, the architecture of computers and operating systems, the principles of wireless networks and data transmission standards. Information security methods and application development technologies for various mobile platforms.

EDUCATIONAL PROGRAMME

// Fundamentals of information technology and vector graphics
// Programming in high-level languages
// Assembly language programming
// Architecture of personal computers
// Design of electronic circuits of programmable mobile systems
// Methods and technologies of database development and management
// Computer systems and networks
// Web technologies
// Programming on the.NET platform
// System programming
// Applications for operating systems
// Design of programmable mobile systems
// Microcontroller devices
// Software for automated process control systems
// Cloud computing
// Machine learning methods
// Application development in high-level languages

PROFESSIONAL COMPETENCIES

// Programming tools
// Creating computer programs using assembler
// Programming of digital computing devices and systems
// Implementation of web applications
// Platform technologies .NET
// Algorithmic and software solutions in the field of system software
// Database creation and administration
// Modern cryptographic transformations of information
// Knowledge of technical means of wireless transmission and reception of signals to ensure the functioning of a programmable mobile system
// Software design for mobile systems
// Programming of microcontroller devices

CAREER PROSPECTS

// Hi-Tech Park
// Great Stone Industrial Park
// State-owned enterprises
// Ministries and departments
// Banks
// Financial institutions
// Educational institutions
// Research institutes

SPECIALTY

GEODESY

The specialist carries out geodetic measurements and creates maps of the area. Work with geodetic instruments and instruments, as well as the basics of cartography and remote sensing of the Earth. Methods of processing and analyzing geodetic data, drawing up plans and maps of the area.

EDUCATIONAL PROGRAMME

// Topographic drawing and computer graphics
// Geomorphology and geology
// Geodesy
// Topography
// Geodetic instrumentation
// Fundamentals of engineering surveys
// Optoelectronic measurements
// Processing of remote sensing data
// Applied photogrammetry
// Fundamentals of land relations and land law
// Engineering geodesy
// Geoinformation systems and technologies
// Economics of the industry
// Gravimetry
// Geodetic support of cadastres
// Geodetic support of automated design systems

PROFESSIONAL COMPETENCIES

// Mathematical calculation methods for the analysis of geodetic measurements
// Methods of using conventional signs of topographic maps
// Verification of geodetic optoelectronic devices
// Analysis of the patterns and regional features of the geological structure of the Earth
// Technologies for decoding aerospace images
// Technologies and methods of photogrammetric processing, decryption and interpretation of Earth remote sensing materials
// Execution of a complex of engineering and geodetic works
// Application of specialized software for performing spatial analysis and modeling
// Principles of cartographic and geodetic activities
// Application of the basic methods of geodetic support of cadastral
// Knowledge of a topographic map to create digital terrain models through specialized software products and computer technologies

CAREER PROSPECTS

// Construction
// Land management and cadastres
// Land development and water management
// Mining geodesy
// Monitoring of natural resources
// Monitoring of engineering facilities
// Design, inspection, repair of geodetic equipment
// Geodetic software development
// Scientific activity

SPECIALTY

INFORMATION SYSTEMS AND TECHNOLOGIES

Specialization in the gaming industry allows students to master the specifics of the development and support of gaming applications, virtual worlds and online multiplayer platforms. Programming languages, methods of software development and optimization, features of creating a graphical interface and sound.

EDUCATIONAL PROGRAMME

// Computer graphics
// Scripting programming languages
// Databases
// Computer networks
// Programming network applications
// Management of innovative projects
// Software testing
// Client side development of web applications
// Web design and design patterns
// Game concept development
// High-level programming languages
// Modern server development technologies
// Visual software development tools
// Cross-platform application development
// Programming for mobile devices
// Online game development
// Three-dimensional modeling
// Database management systems
// Development of gaming applications for for mobile platforms
// Development of virtual worlds

PROFESSIONAL COMPETENCIES

// Modern linguistic and instrumental methods and means of visual modeling
// Tools of high-level programming languages
// Databases creation
// Choosing effective technologies for server-side software application development, creating web applications
// Software engineering methods fore modeling, designing and developing systems
// Modern programming languages
// Development of a friendly user interface
// Visual programming tools and technologies
// Creating cross-platform applications using modern frameworks
// Development of application software for mobile devices
// Code optimization taking into account the architectures of modern processors of non-specialized significance
// Implementation of simulation algorithms

CAREER PROSPECTS

// IT-companies developing software products for the gaming industry
// IT-companies developing application software
// Educational and scientific institutions
// Enterprises related to the development and creation of advertising and cinematographic products
// Departments of automation and management of industrial enterprises

COMPUTER PHYSICS

CYBERSECURITY

ELECTRONIC SYSTEMS AND TECHNOLOGIES

INDUSTRIAL ELECTRONICS

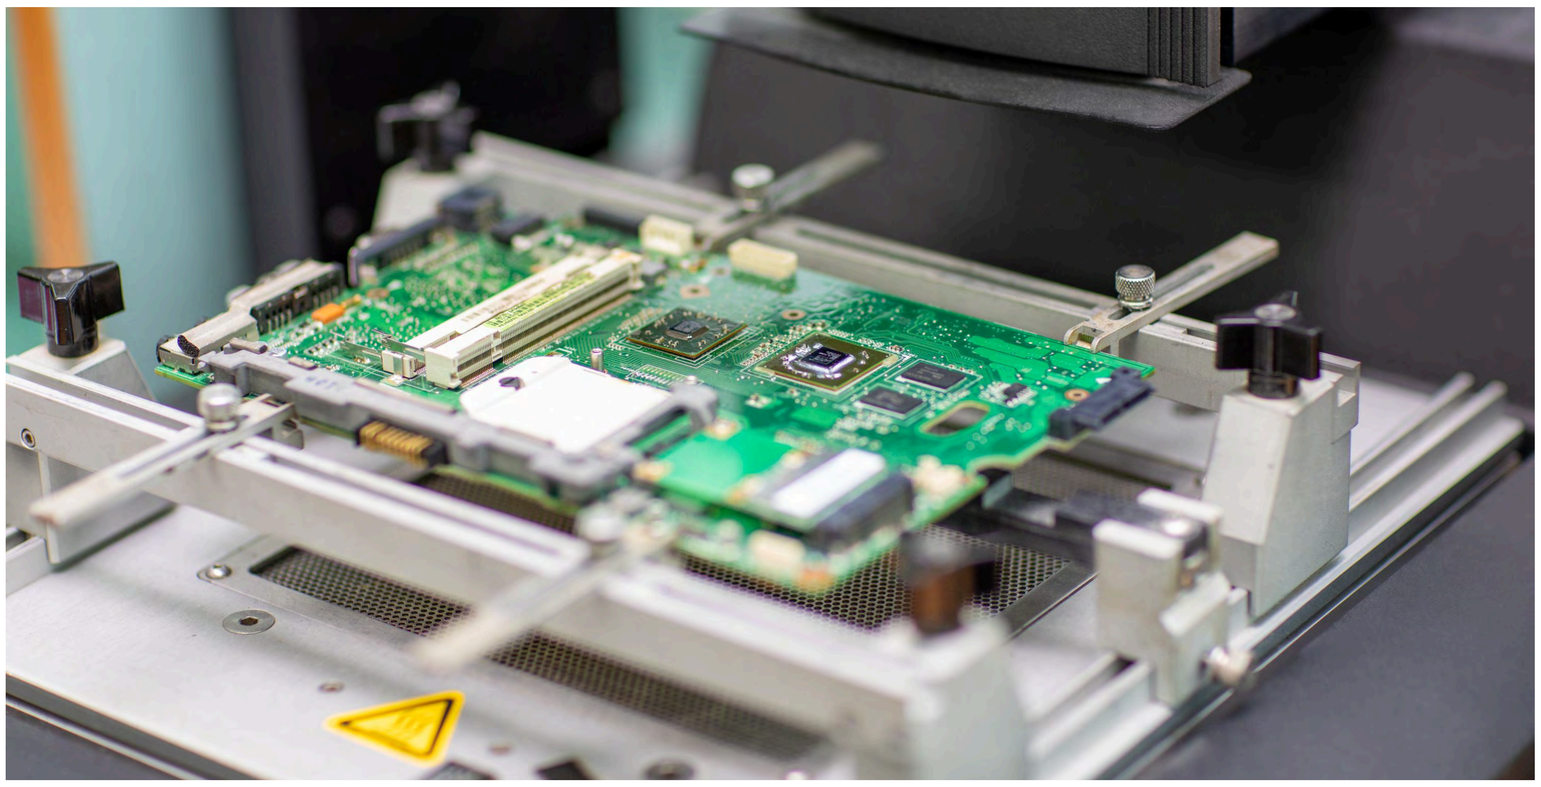

PHYSICAL AND MATHEMATICAL EDUCATION
(MATHEMATICS AND PHYSICS)

TECHNOLOGICAL EDUCATION
(TECHNICAL WORK AND COMPUTER SCIENCE)

**FACULTY
OF COMPUTER SCIENCE
AND ELECTRONICS**

SPECIALTY

COMPUTER PHYSICS

Specialtywhich combines two important areas: physics and computer technology. Computer physics is a key to understanding information technology through the digital maze of physical processes. This is unique specialty, which trains specialists who are able to work at the intersection of physics and computer science.

EDUCATIONAL PROGRAMME

// Mechanics
// Higher mathematics
// Programming
// Information technology and computer graphics
// Programming languages
// Electricity and magnetism
// Electrodynamics
// Physics of atom and atomic nucleus
// Quantum mechanics
// Computer security
// Data processing and modeling systems
// Computer modeling of physical processes
// Modern information technologies
// Database management systems
// Software modeling

PROFESSIONAL COMPETENCIES

// Use of the basic principles of mechanics to solve problems of kinematics, statics and dynamics
// Software development using object-oriented programming technology
// Investigation of gases, liquids, solids, thermal and diffusion processes
// Application of the laws of electromagnetism
// Application of the laws of wave and geometric optics
// Use of a quantum mechanical approach to evaluate the characteristics of atoms, molecules and crystals
// Solving problems of radioactive decay of nuclei, calculation of the Q-factor of nuclear reactions and transformations
// Use of the methods of probability theory and mathematical statistics
// Solving the problem of modeling physical processes using modern computer algebra systems
// Development of a physical and mathematical model of phenomena, processes or systems
// Evaluation of the effectiveness of information security methods

CAREER PROSPECTS

// IT companies
// scientific and industrial organizations
// research institutes and centres
// higher education institutions

SPECIALTY

CYBERSECURITY

It trains specialists in the field of information protection and computer systems from various threats and cyber attacks. Students study methods and technologies of data security, development and implementation of security systems, as well as principles of working with software and hardware to prevent unauthorized access to information

EDUCATIONAL PROGRAMME

// Programming
// Computer science and computer systems
// Security information technology
// Fundamentals of cybersecurity
// Analysis and data processing
// Databases
// Numerical methods and modeling
// Development of the cross-platform applications
// Cryptographic methods of information security
// Programming in Python
// Cybersecurity: information protection in operating systems and computer networks
// Computer networks
// Digital signal processing and computer steganography
// Software development
// Protection against harmful software
// Development technologies and protection of a server-side web applications and web services

PROFESSIONAL COMPETENCIES

// Building, analysis and testing of algorithms and programmes for the solution of problems of information processing
// Skills in software implementation of numerical algorithms and the analysis of the obtained results
// Information security in corporate computer communication networks
// Use of methods for analysis and storage of large amounts of data, big data analytics
// Software development
// Creation and analysis of durability and cryptographic protocols to ensure the security of computer systems
// Creation and production of setting for access and audit policies of operating systems
// Knowledge of programming mobile systems technology
// Creating queries in SQL
// Creation of software and hardware tools and information security systems

CAREER PROSPECTS

// banks
// industrial enterprise security departments
// cybersecurity centres for critical information facilities
// large financial and IT companies
// HR departments
// government agencies
// defense departments

SPECIALTY

ELECTRONIC SYSTEMS AND TECHNOLOGIES

Prepare for a successful career in electronics and technology. Thanks to the digital opportunities and electronics, ideas appear that transform the future. Students learn how electronic components work, learn to read and understand electrical diagrams, and learn how to program microcontrollers and control systems.

EDUCATIONAL PROGRAMME

// Algorithms and programming
// Chemistry
// Physics
// General engineering training
// Engineering computer graphics
// Mathematical analysis
// Design of electronic means
// Technical mechanics
// Element base, electronic components
// Design and technology of software-controlled electronic means
// Design and production of integrated electronics
// Analog and digital circuitry
// Diagnostics and repair of electronic means
// Information protection
// Automatic control of technical systems

PROFESSIONAL COMPETENCIES

// Tools of probability theory and mathematical statistics
// Main methods of algorithmization, methods and means of obtaining, storing, and processing information
// Analysis of substances, their properties, structures and transformations occurring as a result of chemical reactions
// Calculate the results of chemical reactions
// Creation of modules and blocks of electronic tools
// Methods of control of parameters of electronic means and systems
// Methods of calculation of mechanical structural elements of electronic systems
// Information security
// Development of technology for manufacturing structural elements of software-controlled electronic devices
// Development and maintenance of software for the operation of electronic means
// Programming of microcontroller devices
// Diagnostic methods and skills of using control and measuring devices
// Development of testing programmes and quality control systems for electronic devices

CAREER PROSPECTS

// Industrial enterprises
// Design bureaus
// Start-up development teams
// Electrical laboratories for maintenance and repair of instrumentation
// Computer centres
// Departments for the development of electronic devices and devices for industrial installations
// Repair, adjustment, design, research organizations

SPECIALTY

TECHNOLOGICAL EDUCATION (TECHNICAL WORK AND COMPUTER SCIENCE)

Technological education (Technical work and computer science) is a specialty that trains specialists who are able to teach and transfer knowledge in the field of technology and computer science. It is a unique combination of technical skills and pedagogical knowledge that enables graduates to become experts in learning and developing skills in technology and computer science.

EDUCATIONAL PROGRAMME

// Information technology in education
// Psychology and pedagogy
// Materials, technology of information processing and programming
// Analytic geometry and vector algebra
// Technical and artistic creativity, technical drawing
// Computer graphics and multimedia
// Ergonomics
// Creation and use of electronic educational resources
// Technological entrepreneurship
// Applied informatics
// Architecture and computer software
// Basics of 3D modeling
// Educational robotics
// Web programming

PROFESSIONAL COMPETENCIES

// Knowledge of methods and technologies in the field of theory and methodology of pedagogical activity
// Implementation of educational, research and innovation activities
// Activities in the field of computer graphics and multimedia, creation and processing of models and images
// Development of educational and methodological support for the educational process of labor training
// Development of graphic and technological documentation on wood and metal processing technology
// Use of materials made of metals, alloys and non-metallic materials
// Application of algorithmization and programming methods and creation of computer programmes
// Use of the theory and methodology of teaching computer science
// Knowledge in the field of architecture and software
// Use of numerical methods and computer modeling
// Web programming, website and software development activities

CAREER PROSPECTS

// Education (schools, out-of-school educational and training institutions, vocational, specialized secondary and higher educational institutions)
// Culture (museums, leisure centers, folk art centers).
// Business (manufacturing enterprises and enterprises that produce decorative and applied arts, craft workshops, IT-companies)

SPECIALTY

PHYSICAL AND MATHEMATICAL EDUCATION (MATHEMATICS AND PHYSICS)

The specialty combines in-depth training in mathematics with the study of programming technologies and physics, along with knowledge of modeling technologies for physical processes. It is aimed at developing a creatively thinking and methodologically proficient educator capable of conveying their knowledge using the most modern technical tools.

EDUCATIONAL PROGRAMME

// Higher algebra and analytical geometry
// Theory of probability and mathematical statistics
// Pedagogical technologies
// Methods of data processing in measurements
// Kinematics and statics
// Dynamics
// Innovative practices in education
// Inclusive educational practices
// Molecular physics
// Electricity and magnetism
// Optics
// Mathematical methods in physics
// Quantum physics
// Electrodynamics
// Information technologies in education
// Computer graphics and multimedia
// Methods of algorithmization and programming
// Geometric constructions of figures and plane transformations
// Methods of figure representation and foundations of geometry
// Functions of several variables
// Algebraic structures and number theory
// Differential equations and series
// Virtual modeling of physical processes
// Algebraic methods in information security
// M technologies in education

PROFESSIONAL COMPETENCIES

// Organization and implementation of the teaching process for mathematics and physics
// Management of students' cognitive and educational activities
// Utilization of elements of research and innovative activities
// Organization and execution of the managerial activities of the educational institution
// Development and design of educational technology, such as software-based solutions

CAREER PROSPECTS

// Research activities in scientific institutions of mathematical and pedagogical profiles
// Managerial activities in educational institutions and authorities
// Education (educational institutions, higher education institutions, secondary specialized educational establishments, colleges, lyceums)
// Educational services (developmental schools, clubs, courses, etc.)

SPECIALTY

ELECTRIC POWER INDUSTRY AND ELECTRIC ENGINEERING

Studying at this specialty, undergraduates dive into the depths of science, studying the complex principles and laws that govern energy and its use. The opportunity to understand and to control electricity. Here, each element studied is part of the knowledge that opens the way to new heights of technical excellence.

EDUCATIONAL PROGRAMME

// Basic engineering training
// Engineering graphics
// Structural materials
// Applied Mechanics
// Information technology
// Energy practice (educational)
// Metrology, standardization and conformity assessment
// Computer-aided design tools in the energy sector
// Electrical and electronics engineering
// Thermal power engineering
// Theoretical thermal engineering
// Production and distribution of electric power
// Scientific and innovative activity
// Environmental and energy sustainability
// Relay protection and automation
// Energy efficiency, economics and organization of production
// Power supply systems
// Installation and operation of electrical equipment

PROFESSIONAL COMPETENCIES

// Differential, integral, matrix calculation
// Design standards, standards and normative materials for the implementation of design developments of parts and assemblies
// Calculation of short-circuit currents and their symmetrical components
// Design and operation of transformers, synchronous and asynchronous electric machines
// Calculation of electricity production
// Application of software and information support in power supply systems
// Ability to count electricity consumers
// Knowledge of thermal engineering and hydraulics
// Knowledge and analysis of electricity quality indicators
// Implementation of energy resource savings in production
// Methods of troubleshooting, installation, commissioning and operation of electrical equipment

CAREER PROSPECTS

// Enterprises of electric networks, energy sales, energy supervision, design organizations, energy management at industrial enterprises

SPECIALTY

ACCOUNTING, ANALYSIS AND AUDIT

Accounting is a key element of every successful business. All companies, regardless of their size and form of ownership, keep records of their activities. Accountants play a key role in this process, ensuring that accounting records are properly maintained and that financial laws are followed. Graduates can work in a variety of industries, from small businesses to large corporations, government agencies, or accounting firms.

EDUCATIONAL PROGRAMME

// Theory of accounting and analysis of economic activity
// Control (supervisory) activities
// Organization of auditing activities
// International financial reporting standards and auditing activities
// Forensic accounting expertise
// Financial accounting and economic activity in industry
// Budgeting
// Accounting in economic sectors
// Analysis of economic activity in economic sectors
// Practical auditing in industry
// Fundamentals of management and marketing
// Business process analysis
// Financial management
// Digital mathematics in excel
// Accounting
// Financial (accounting) reporting
// Analysis of financial (accounting) reporting
// Taxes and taxation
// Tax accounting

PROFESSIONAL COMPETENCIES

// Practical application of basic concepts and methods of accounting
// Distribution of financial and material resources between companies in the economic sector and between departments or divisions of individual companies
// Use of modern computer programs for processing financial information
// Preparation of financial statements in accordance with International Financial Reporting Standards
// Preparation of additional disclosure information for individual financial statement indicators
// Financial analysis and ability to analyze the profitability of suppliers, products, customers, sales channels and business units in general
// Understanding the role of accounting information in strategic management decisions
// Conducting audits of financial statements

CAREER PROSPECTS

// Accounting (CFO, accountant)
// Analysis (financial analyst, risk manager, financial planner)
// Audit (certified Public Accountant, Forensic accountant)
// Consulting services
// Taxation (tax consultant)
// Statistics

SPECIALTY

BUSINESS ADMINISTRATION

The basics of business management in an organization. Students study the principles of enterprise organization and management, analyze the economic situation and develop business development strategies. They also study human resources, finance and marketing management techniques in order to effectively lead the organization and achieve their goals.

EDUCATIONAL PROGRAMME

// Economic theory
// Microeconomics
// Management
// Information technologies
// Business ethics
// Theory of the development of socio-economic systems
// Organization and provision of business
// Econometrics
// Macroeconomics
// International economics and international business
// Digital technologies in business administration
// Marketing and logistics
// Sales technologies
// Electronic business
// Accounting and auditing
// Finance and credit
// Banking
// Taxation
// Financial management
// Business communications
// Crisis management
// Internet Marketing
// Risk management
// PR management
// Project management
// Innovative technologies in Internet business

PROFESSIONAL COMPETENCIES

// Concepts, methods of econometrics, econometric models and tools
// Understanding the behavior of consumers and organizations in a market economy
// Mechanisms of aggregated markets functioning and tools of fiscal, tax and monetary policy
// Analytical tools for analyzing the effectiveness of business processes implementation
// Effective methods of doing business in global markets
// Mechanism and features of the institutional economy functioning
// Effective management solutions
// Managing an effective investment policy
// Analysis of the competitive environment
// Principles of production activities organization
// Analysis of market and other risks
// Digital technologies in business process management
// Development of the organization's marketing strategy, Laws and principles of logistics
// Methods and technologies of sales process management
// Sound management decisions
// Effective communication technologies
// Business in the Internet environment

CAREER PROSPECTS

// Public administration
// Education
// Wholesale and retail trade
// Industry
// Financial and insurance activities
// Scientific research and development
// Advertising and market research
// Security activities
// Business

SPECIALTY

ECONOMICS AND MANAGEMENT

Students learn ways and methods of effective business management and production organization, learn to set goals and build strategies for achieving optimal results with the minimal resource spend. The specialty programme also presupposes the study of the tax system, international economic relations, and legal basics of economy regulation.

EDUCATIONAL PROGRAMME

// Economic theory
// Microeconomics
// Economic history
// Organization and provision of business
// Business activities organization
// Production and commercial activities in the organization
// Production technologies
// Finance
// Marketing
// Statistics and econometrics
// Strategic management/Advertising management
// International economics
// Accounting
// Investments and innovative development of the organization
// Economics and innovation management
// Business diagnostics of the enterprise
// Planning and organization management
// Investment analysis
// Competitiveness of the organization
// Personnel management
// Ecosystem of venture activities
// Management technologies
// High-tech economy

PROFESSIONAL COMPETENCIES

// Statistical methods, econometrics, econometric models and tools
// Understanding consumers' and organizational behavior
// Analysis of trends in the development of the international economy
// Management functions of the organization
// Business decisions
// Production preparation and control of technological processes
// Diagnosis of business risks
// Assessment of the financial and economic condition of the organization

CAREER PROSPECTS

// Public administration
// Education
// Wholesale and retail trade
// Industry
// Financial and insurance activities
// Scientific research and development
// Advertising and market research
// Security activities
// Business

SPECIALTY

ECONOMIC SECURITY

Economic security is an important aspect of the successful functioning of the country and business. In the very first approximation, it is the protection of the financial, material and economic interests of the country, the enterprise and the individual. Today it is not just an economist, but a specialist who has a deep knowledge of economic processes, financial instruments, international relations and legislation. Such specialists prevent illegal actions, analyze data, make decisions, manage risks, use resources efficiently, and recognize threats.

EDUCATIONAL PROGRAMME

// Pricing and Business Planning
// Economic Analysis and Business Process Analysis
// Marketing Research and Competitive Intelligence
// Financial Control and Audit
// Organization and Methodology of Tax Inspections
// Risk Management
// Personnel Security
// Fundamentals of Management Decision-Making
// Modeling and Design of Economic Systems
// Administrative and Delict Law
// Commercial Law
// Taxes and Taxation
// Currency Regulation and Currency Control
// Digital Economy
// Information Security
// Fundamentals of Information Protection
// System Analysis and Assessment of Economic Security Factor
// Organization of Production and Safety of Technological Processes
// Modern Payment Systems and Their Security
// Technologies for Preventing Illegal Activities in Business

PROFESSIONAL COMPETENCIES

// Development and implementation enterprise management strategies
// Planning, control and management of resources
// Use of modern computer programs for processing financial data
// Identification and prevention illegal actions in the field of economic activity
// Competitive intelligence
// Analysis of suppliers, products, customers, and distribution channels
// Identification and prevention of unfair competition
// Analysis and improvement of business processes
// Risk management

CAREER PROSPECTS

// Specialist of economic/HR/marketing services of enterprises
// Specialist of the Economic Security Service
// Specialist of the Department for Combating Economic Crimes
// Risk Manager
// Business Analyst
// Procurement Specialist
// Internal Control Specialist
// Internal Auditor
// Specialist in a consulting/audit/IT company

SPECIALTY

ELECTRONIC ECONOMY

Digital technologies are becoming an integral part of business and marketing. Using the Internet and social networks as a powerful tool for promoting goods and services. The subtleties of online marketing and strategies to attract the attention of potential customers in the virtual space.

EDUCATIONAL PROGRAMME

// Algorithmization and programming
// Microeconomics and macroeconomics
// Introduction to marketing and economics
// Fundamentals of communicative design
// Databases
// Internet marketing and e-commerce
// Marketing analysis and strategy
// Marketing research
// Strategic marketing analysis
// Fundamentals of information security
// Economics of organizations
// Product policy and brand management
// Marketing communications
// Technological support of electronic marketing
// Search engine promotion and web analytics
// Pricing policy and consumers' behavior
// Modeling, accounting and finance
// Logistics and sales
// Sales management technologies
// SMM marketing and online advertising
// Copywriting and content marketing
// Mobile applications in marketing

PROFESSIONAL COMPETENCIES

// Knowledge about the patterns and principles of the development of economic processes
// Methods of economic calculations
// Statistical methods for analyzing economic data arrays
// Programming technologies
// Methods and techniques for developing programmes based on templates and class libraries
