PSU.by EUPHROSYNE POLOTSKAYA STATE UNIVERSITY OF POLOTSK

Euphrosyne Polotskaya State University of Polotsk is an intellectual and cultural center, a key factor of scientific development. It is a whole ecosystem that unites education, science, industry and human resources.

Educational traditions of Belarus were born in Polotsk.
University is a scientific and educational complex with a developed infrastructure for innovative scientific research and training of highly qualified personnel.

Technological education

// faculty of civil engineering
// faculty of mechanics and technology

FACULTY OF HUMANITIES

SPECIALTY

HISTORY

This specialization focuses on exploring the past, interpreting the present, and planning for the future. Master's students are trained to carry out research on historical topics, participate in analytical work related to social development and governance, and teach subjects in history and social sciences.

EDUCATIONAL PROGRAMME

// Modernization processes in the modern and contemporary era
// Socio-cultural anthropology
// Historical research methodology
// Methodological foundations of teaching history in higher education
// Project management in historical education and science
// Ethnogenesis theory in contemporary historiography
// Historical demography of Belarus
// Historical and social memory
// Historical sociology
// Module "Traditions and Innovations in the Study of Belarusian History"
// Institutionalization of historical science in Belarus
// Natural science methods in archaeology
// Module "Research Work"
// Pedagogy and psychology of higher education
// Philosophy and methodology of science
// Information technology foundations
// Foreign language

PROFESSIONAL COMPETENCIES

// Scientific cognitive techniques in research activities
// Research and innovative tasks
// Communicating in a foreign language in an educational environment
// Comparative analysis of advanced achievements in the field of historical knowledge
// Development of human society and its patterns
// Key political and economic processes of nations and regions in historical retrospectives
// Systematization and classification of Social and ethnocultural processes and their impact on the historical development of society
// Analytical and simulation models for historical education and science management

CAREER PROSPECTS

// Educational institutions of all types
// Government authorities
// Research institutions
// Cultural institutions
// The field of journalism, media, and publicist activities

SPECIALTY

LINGUODIDACTICS

Students study methods of teaching foreign languages with an emphasis on pedagogical and linguistic aspects. The programme includes the study of modern language teaching methods, language policy, intercultural communication and the development of educational materials.

EDUCATIONAL PROGRAMME

// Linguodidactics and methods of teaching foreign languages
// Trends in the development of language education
// Normative and methodological support of the educational process
// Theory of speech activity
// Basics of innovative technologies in teaching foreign
// Theory and practice of intercultural communication
// Discourse analysis
// Development of educational Internet resources for teaching foreign languages
// Business foreign language
// Information technologies
// Foreign language

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Knowledge of methodological tools of approaches to teaching foreign languages
// Modern educational technologies
// Designing innovative technologies and means of teaching foreign languages
// Interlanguage and intercultural interaction
// Development of educational Internet resources and electronic didactic materials
// Knowledge of a foreign language for communication in an interdisciplinary and scientific sphere

CAREER PROSPECTS

// Educational institutions
// Language and educational centers
// Educational departments
// Management departments of executive authorities

SPECIALTY

LITERATURE STUDIES

The study of the literary process on a broad theoretical basis: the historical process and the problems of periodization of literature, the conditions of its origin, the typology of genres, styles and stable images, the peculiarities of poetics and literary connections. The programme includes text analysis, literary theory research, literary history and critical approaches.

EDUCATIONAL PROGRAMME

// Methodology of literary research
// Actual problems of modern literary studies
// Poetics of a literary text
// Literary text as an object of literary research
// Myth and myth-making in the literature of the 19-20 centuries
// Literature in historical and contextual study
// Methods of teaching literature in higher education
// Realism, modernism and postmodernism in world literature
// Poetics of drama and novel
// Literary process and media space
// Literary translation

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Psychological and pedagogical methods and information and communication technologies in education and management
// Methods and methodology of literary research
// Analysis of a literary text through the prism of modern discourse
// Application of formal documents and modern concepts in the field of methods of teaching literature in higher education
// Determination of artistic methods and trends in world literature
// Knowledge of the history and theory of poetry
// Knowledge and understanding of the literary process and its media coverage
// In-depth skills in the theory and practice of translation in the context of literary and intercultural relations
// Knowledge of the theory and history of literary criticism, the poetics of a literary text

CAREER PROSPECTS

// Educational institutions
// Newspaper, radio and television editorial offices
// Specialised enterprises
// State authorities

SPECIALTY

PHILOLOGY EDUCATION

The specialty is intended for those who want to deepen their knowledge and skills in the field of philology. Within the framework of this specialty, students study various aspects of literature, analyze texts and master methods of teaching literature. After completing the programme, students acquire in-depth knowledge in their subject area and can pursue a career in the scientific or teaching field.

EDUCATIONAL PROGRAMME

// Methodology of pedagogy
// Current trends in philological education
// Philosophy of language
// Adaptive didactics
// Innovation management in education
// Methods of teaching philological disciplines in higher education
// Text as an object of philological research
// Pedagogical skills
// Text linguistics
// Foreign language

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Methods, information and communication technologies in education and management
// Knowledge in the field of language philosophy in research and professional activities
// Effective educational technologies in teaching philological disciplines in higher institutions
// Analysis of pedagogical situations
// Mechanisms of constructing speech activity
// Rules for the construction and functioning of the text
// Methodological models, methods, and learning technologies
// Interlanguage and intercultural interaction

CAREER PROSPECTS

SPECIALTY

PHYSICAL EDUCATION AND SPORTS

The programme allows students to deepen their knowledge, improve skills and acquire professional techniques to perform effectively and efficiently in teaching and leadership roles within the fields of sports, recreation and education. It focuses on theory and practice of organizing physical education activities, recreational and adapted physical culture, and sports training in various types of educational institutions.

EDUCATIONAL PROGRAMME

// Pedagogy and psychology of higher education
// Social and communication technologies in professional activity
// Information technologies and mathematical statistics in physical education and sports
// General theory and practical aspects of physical education and sports
// Modern problems of physical education and sports
// Pedagogical technologies in physical education and sports
// Medical and biological module
// Anti-doping policy in modern sports
// Physiological foundations of sports training
// Sports anthropology
// Functional diagnostics in sports
// Technologies for restoring the body after physical exertion
// Technologies for monitoring training and competitive activities
// Professionalization of modern sports
// Non-traditional methods of physical education and sports
// Fundamentals of information technology

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Systematic and comparative analysis of modern scientific achievements
// Planning, organization, control and adjustment of the educational process
// Solving modern problems and practical tasks in the field of physical education and sports
// Knowledge about the patterns and mechanisms of human development
// Skills of practical use of functional diagnostic techniques
// Techniques of medical and wellness practices
// Planning, organization and control of recreational and adaptive physical education classes
// Development of comprehensive wellness and correctional programmes
// Programming of personal and group classes with modern types of health-improving physical training
// Management of physical education for people engaged in adaptive physical education
// Technologies for the organization of adaptive physical education and sports training

CAREER PROSPECTS

// Institutions of preschool, secondary, specialized secondary, higher education
// Children's and youth sports schools
// Physical education and sports clubs, physical and sports training centers
// Extracurricular and educational institutions
// Sports, travel, fitness clubs
// Tourism service companies and travel agencies

SPECIALTY

SOCIAL, PEDAGOGICAL AND PSYCHOLOGICAL EDUCATION

This programme deals with effective teaching methods and solving psychological problems. Undergraduates receive up-to-date knowledge in the field of psychology and education and get acquainted with various areas of professional psychological practice. Graduates possess the necessary competencies and tools for psychological work with people of all ages, to resolve problem situations in the educational environment and families.

EDUCATIONAL PROGRAMME

// Methodology of psychological and pedagogical research
// Pedagogical experiment in modern socio-cultural conditions
// Modern trends in the development of socio-pedagogical and psychological education
// Innovation management in education
// Techniques and methods to increase learning motivation
// Actual problems of social psychology
// Psychological and social bullying
// Modern concepts and methods of personnel management
// Basics of organizational consulting
// Fundamentals of organizational psycholinguistics

PROFESSIONAL COMPETENCIES

// Psychological support of personal development in the context of digitalization of education
// Innovative learning technologies
// Mechanisms for creating an innovative information and educational environment
// Diagnostics of the educational environment
// Features of value orientations system
// Skills and abilities in the field of understanding and managing emotions
// Knowledge of the basic principles, methods and techniques of cognitive diagnostics and counseling
// Solving personnel management problems
// Diagnosis and advisory solutions to psychological problems

CAREER PROSPECTS

// Social programme management (organizational psychologist, HR consultant, psychodiagnostic, conflict management, employee training, assistance in creating a corporate culture, recruitment)
// Secondary education
// Higher education
// Specialized secondary education
// Additional education

CONSTRUCTION ENGINEERING

FACULTY
OF CIVIL
ENGINEERING

SPECIALTY

CONSTRUCTION ENGINEERING

A field of knowledge that combines the theory and practice of design, construction and operation of buildings and structures for various purposes. Students gain skills in working with specialized software for the design and modeling of structures, learn to create structures that can withstand the loads of time.

EDUCATIONAL PROGRAMME

// Theory and practice of ensuring reliability, safety and durability of constructions, buildings and structures
// Software and information technologies
// Methods and technologies in the design and manufacture of constructions, buildings and structures
// Engineering psychology, pedagogy and team management
// Business planning in construction
// Analysis of building structures
// Organization of design and survey activities
// Computer-aided design and modeling
// Restoration and reconstruction of buildings and structures
// Methods of monitoring and diagnostics in construction
// Calculation of building structures and their systems using the latest software systems

PROFESSIONAL COMPETENCIES

// Innovative activities
// Knowledge of the organization of design, survey and production activities
// Methods for assessing the energy efficiency of buildings and structures
// Business process modeling
// Innovative methods and technologies in the design, organization, construction and manufacture of constructions, buildings and structures
// Installation of foundations for industrial and civil buildings

CAREER PROSPECTS

// companies leading the design, testing, construction of residential and industrial facilities, including engineering structures
// design bureaus
// construction companies
// research organizations

SPECIALTY

CONSTRUCTION ENGINEERING

Specialist for the management of research, development and innovation in the field of civil engineering. The latest technologies and design methods, modern computer programs for modeling and analysis of building structures. Project management skills. New perspectives for civil engineering.

EDUCATIONAL PROGRAMME

// Theory and practice of ensuring reliability, safety and durability of constructions of buildings and structures
// Information technologies in investment and construction activities and design and survey activities
// Engineering psychology, pedagogy and team management
// Development and research of innovative building materials and technologies
// Computer modeling of building composite materials
// Business planning in construction
// Physical and chemical methods of research of building materials
// Innovative technologies for the construction and operation of buildings and structures
// Efficient building composites for 3D additive technologies
// Innovative entrepreneurship in construction
// Computer-aided design and modeling
// Research work
// Resource-saving technologies for the production of building materials

PROFESSIONAL COMPETENCIES

// Safety analysis of building structures
// Use of modern software systems for design, 3D modeling, development of information models of industrial and civil facilities
// Methods of pricing in construction
// Application of computer modeling for scientific research in the field of building materials science
// Development of building composites
// Solving research tasks for the development of resource-saving technologies for the production of building materials
// Ability to organize the production and marketing of innovative construction products

CAREER PROSPECTS

// Construction companies
// Research centers and laboratories
// Universities and institutes
// Specialised industry organizations
// Engineering firms engaged in the improvement of scientific and technical developments

SPECIALTY

CONSTRUCTION ENGINEERING

Currently, the oil and gas pipeline is the most economical and environmentally sustainable mean of transporting oil and gas. It enables the efficient delivery of oil to refineries, natural gas to residential and industrial consumers, and petroleum products to fuel stations.
In the Republic of Belarus, the training of engineers in Pipeline Transport, Oil and Gas Storage is carried out only at Euphrosyne Polotskaya State University of Polotsk.
For the oil and gas industry, graduates of this specialty are exceptional and valuable experts.

EDUCATIONAL PROGRAMME

// Software tools and information technologies
// Information technologies in project and survey activities, as well as in investment and construction activities
// Environmental safety in oil and gas transportation and storage
// Designing and operating systems and facilities for the transportation and storage of gas and oil
// Construction facilities and systems for oil and gas transportation and storage
// Design and operation of fuel distribution systems
// Design and operation of gas supply systems
// Construction of linear facilities for oil transportation and storage systems
// Maintenance of facilities and systems for the oil and gas transportation and storage

PROFESSIONAL COMPETENCIES

// Innovative sensitivity and capacity for innovative activity
// Safety of structural constructions, practical techniques for ensuring the durability of construction products, buildings, and facilities
// Development, analysis, and optimization of methods for constructing systems for the transportation and storage of oil and gas
// Development and improvement of approaches to organizing the efficient operation of oil and gas transportation and storage systems
// Mathematical modeling and analysis of strength problems in metal structures, physical and thermal processes, operating conditions, and pumping modes of oil and gas transportation and storage systems
// Methods for diagnosing the condition of pipeline transport, storage, and distribution objects for gas, oil, and petroleum products
// Repair technology

CAREER PROSPECTS

// The largest oil and gas companies in the World
// Organizations operating main pipelines
// Organizations for the operation of oil depots and petroleum product storage facilities
// Oil refining organizations
// Organizations of the gas distribution system
// Design organizations

// Information technologies in science and production
// Innovative methods and technologies
// Modeling and optimization of technological processes of hydrocarbon processing
// Intellectual property and innovation
// Applied design of chemical and technological processes of hydrocarbon processing
// Environmental and industrial safety of production
// Environmental quality management
// Research practice

PROFESSIONAL COMPETENCIES

// Innovative susceptibility and ability to innovate
// Innovative technologies for deep processing of hydrocarbon raw materials
// Scientific methodology for the creation of automated production management systems
// Modern methods of instrumental analysis of the composition and properties of substances and materials
// Planning of production activities
// Technological processes of oil and gas refining
// Resource-saving, low-waste and non-waste technologies and production of industrial organic and petrochemical synthesis
// Optimal design of chemical reactors
// Methods of protecting metals from corrosion

psu.by/en/

CAREER PROSPECTS

// Oil and gas processing enterprises
// Petrochemical enterprises
// Chemical plants
// Academic, research and design institutes
// Enterprises specializing in the processing, transportation, compounding, storage of gas, oil and petroleum products

SPECIALTY

INNOVATIVE TECHNOLOGIES IN MECHANICAL ENGINEERING

The specialist is able to design and create new machines and equipment, as well as maintain and repair existing ones. Undergraduates know how to work with various materials and create unique products from them.

EDUCATIONAL PROGRAMME

// Mathematical modeling of technical objects and processes
// Physical and technical foundations of innovative technologies formation in mechanical engineering
// Scientific foundations of mechanical engineering technology
// Pedagogy and psychology of higher education
// Promising business technologies
// Information technology in mechanical engineering
// Modern technologies in mechanical engineering
// Prospects of robotics in mechanical engineering
// Prospects for the creation and application of new materials in mechanical engineering
// Intelligent systems
// Additive technologies
// Research practice

PROFESSIONAL COMPETENCIES

// Methods of mathematical modeling of technical objects and processes of manufacturing machine parts using computer technology
// Equipment and tooling designs, mechanical assembly technologies
// Modern programming languages
// Highly efficient innovative technologies
// Principles of investment design and business planning
// Technological processes of manufacturing parts by additive methods

SPECIALTY

MACHINES, AGGREGATES AND PROCESSES

Undergraduates study the processes and devices used in the chemical industry, learn to design and develop new technologies that will help improve the efficiency and safety of chemical processes. All this allows a master to solve important scientific and production tasks and bring their solution to the level of practical use

EDUCATIONAL PROGRAMME

// Innovative technologies and production equipment in the industry
// Modeling of technological processes and equipment of chemical technologies
// Designing
// Chemical production machines and apparatuses of special purpose
// Methods of protection of materials and equipment of chemical industries from corrosion
// Research practice

PROFESSIONAL COMPETENCIES

// Solving engineering problems
// Principles of operation of chemical production machines and devices
// Knowledge of computer-aided design systems for technological processes and production facilities in the chemical and petrochemical industries
// Diagnostics and assessment of the operability of technological equipment
// Knowledge of methods for protecting metals from corrosion in the design of chemical industries

SPECIALTY

OCCUPATIONAL SAFETY AND ERGONOMICS

Combines knowledge and skills in the field of occupational safety and ergonomics, and specializes in the management of safety of production processes. This is the skill of risk management, creating comfortable working conditions and ensuring safety in the workplace, where every decision is a step towards protecting life and health

EDUCATIONAL PROGRAMME

// Labor protection
// Ergonomics
// Production process management
// Big data analytics technologies
// Expert assessment of working conditions
// Human resources
// Fundamentals of information technologies
// Assessment of the explosion and fire hazard of technological processes
// Innovative security technologies
// Technological practice

PROFESSIONAL COMPETENCIES

// Generation and implementation of innovative ideas
// Methods of experiment planning
// Creation of the development direction of the occupational safety management system in the organization
// Monitoring and development of measures to prevent potentially dangerous man-made factors and ensure environmental and industrial safety
// Expertise of design solutions at all stages of human-machine systems design
// Methods for assessing the technical condition of machinery and equipment
// Examination of production conditions
// Methods and techniques of effective personnel management
// Teaching activities in educational institutions
// Fire safety systems in the organization
// Complex analysis of technical systems

GEODESY

MATHEMATICS AND COMPUTER SCIENCE

COMPUTER SCIENCE AND PROGRAMMING TECHNOLOGY

FACULTY
OF INFORMATION
TECHNOLOGIES

SPECIALTY

GEODESY

A specialist is skilled in modeling, analyzing, and managing spatially referenced data, and can identify the best approaches and techniques for addressing professional challenges. Graduates can pursue careers in research, production, and design organizations related to cartography, geodesy, and land management, as well as in academic and industry-focused institutions.

EDUCATIONAL PROGRAMME

// Satellite systems and positioning technologies
// Modern methods of mathematical processing and design of geodetic networks
// High-precision geodetic measurements in the real field of gravity
// Higher geodesy and fundamentals of coordinate-time system formation
// Photogrammetric processing of remote sensing data
// Automated technologies for engineering and geodetic works
// Methods of geodetic monitoring of engineering structures
// Geoinformation and geodetic support for land management and cadastral works
// Modern technologies for processing geodetic measurements
// Software for processing geospatial data

PROFESSIONAL COMPETENCIES

// Modern methods of mathematical processing and design of geodetic networks
// Principles of coordinate-time system formation
// Modeling the development of geodynamic processes and their impact on the coordinate framework
// Technology for deciphering aerospace imagery
// Technologies and methods for photogrammetric processing, deciphering, and interpretation of remote sensing data
// Development of orthophoto maps, digital terrain models, and relief representations derived from aerial photography, including data captured by unmanned aerial vehicles
// Methods and tools for performing high-recision geodetic measurements in the real field of gravity
// Skills in performing a range of engineering and geodetic works for monitoring engineering structures
// Development of geodetic work production projects in construction
// Application of fundamental methods of geodetic and geoinformation support for land management and cadastral works
// Methods and tools for processing geospatial data
// Development and management of new technological processes in geodetic production

CAREER PROSPECTS

// Construction
// Land management and cadastre
// Mining engineering
// Monitoring of engineering structures
// Monitoring of natural resources
// Melioration and water management
// Design, Calibration, and Repair of Geodetic Equipment
// Development of geodetic software
// Scientific research activities

MATHEMATICS AND COMPUTER SCIENCE

Development of web applications, websites and Internet services. Students study modern programming languages, web application development methods, user interface design, as well as the basics of information security and website optimization. As a result of the training, graduates receive the skills necessary to work in the field of web development and the IT industry

EDUCATIONAL PROGRAMME

// Mathematical and applied statistics
// Methodology of mathematical research
// Cloud technologies
// Machine learning
// Computer vision and graphics
// Python language
// Functional programming and Scala technologies / Julia language
// .Net technologies
// Java technologies
// Mathematical models in information technology
// Computer modeling applications
// Analysis and design of information systems
// Data mining
// Cryptotechnology
// Optimization and SEO

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Development of innovation sensitivity and ability to innovate
// Application of psychological and pedagogical methods and information and communication technologies
// Application of methods of mathematical formalization of conflict situations
// Application of mathematical apparatus and methods of scientific cognition
// Data analysis tools and algorithms
// Application of modern technologies for software development
// Methods of designing and protecting information systems
// Analysis and assessment of the business and technical context, formulation and coordination of requirements
// Development and implementation of business strategies

CAREER PROSPECTS

// IT industry enterprises
// Manufacturing enterprises
// Public administration bodies
// Financial structures
// Research institutes

SPECIALTY

COMPUTER SCIENCE AND PROGRAMMING TECHNOLOGY

Data processing algorithms, including statistical analysis, machine learning, and data visualization. Programming languages, specialized libraries and tools for working with big data. A specialist is able to process an endless stream of information and train others to work with it

EDUCATIONAL PROGRAMME

// Project management in the field of information technology
// Neural network modeling
// Machine learning
// Data mining technologies
// Intelligent image processing
// Ensuring the confidentiality of information on the Internet
// Neural network modeling
// Business analysis in IT projects
// Business and management
// Data mining technologies
// Intelligent image processing
// Mathematical modeling systems
// Architectural solutions and platforms for processing large amounts of information
// Technologies for the development of corporate systems
// Modern mobile system programming technologies

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Knowledge of technical and software tools for the implementation of information technologies
// Development of intelligent software products
// Use of algorithms and specialized software
// Proficiency in the development of interpreters, compilers of new programming languages
// Knowledge of the principles for building an application architecture

CAREER PROSPECTS

// Design and implementation of complex information systems
// Managing the development of software projects in specialised companies
// Work in a wide range of specialties: developers of modern computer architecture, programmers, computer network administrators, system architects, system programmers, system analysts

APPLIED PHYSICS

INFOCOMMUNICATION SYSTEMS
AND NETWORKS INFORMATION

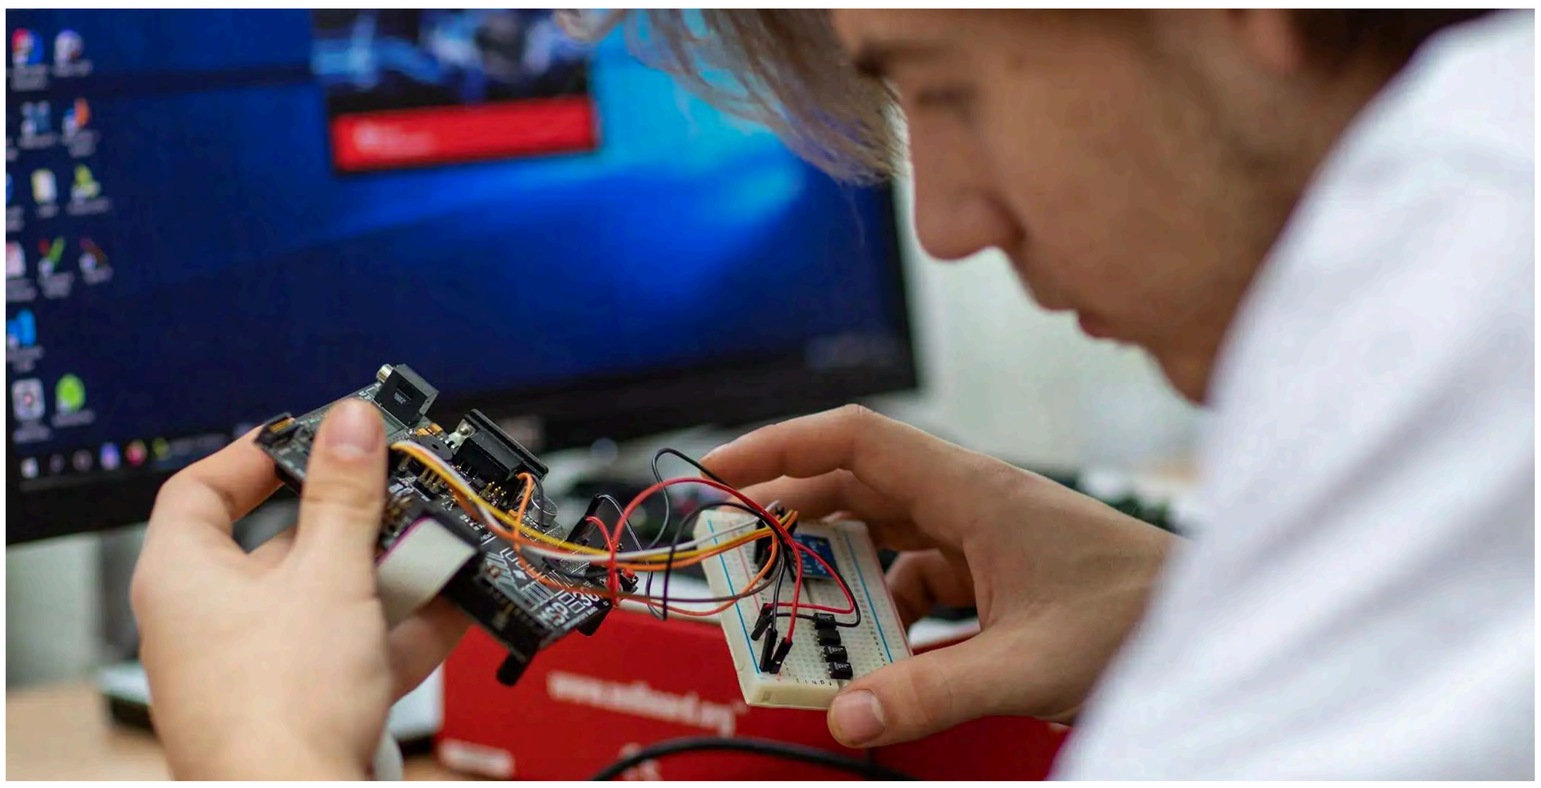

TECHNOLOGICAL EDUCATION

FACULTY
OF COMPUTER SCIENCE
AND ELECTRONICS

SPECIALTY

APPLIED PHYSICS

Undergraduates dive into the depths of physical laws and phenomena, studying their theoretical foundations and practical application. The opportunity to work on projects, conduct experiments and analyze the results obtained. Deep knowledge in the field of physics. Here, practical scientists and future geniuses of science gain their skills

EDUCATIONAL PROGRAMME

// Technical supplements of theoretical physics
// Mathematical methods in physics
// Methods of mathematical modeling of physical processes
// Computational methods in physics and physical experiment
// Organization and programming of industrial networks
// Research work
// Modern control and diagnostic tools
// Technologies of creative education in higher education
// Modeling and optimization of parameters of electrophysical systems
// Automation of design and production processes
// Research practice

PROFESSIONAL COMPETENCIES

// Methods of theoretical physics
// Methods of thermodynamics and statistical physics
// Methods of computational experiment
// Knowledge of the physical processes of interaction of laser radiation with condensed matters
// Concepts of modern branches of mathematics
// Development and programming of intelligent microcontroller systems and intelligent sensors
// Knowledge of the laws of charge transfer processes, electronic optical and magnetic properties of nanomaterials
// Calculation of the main characteristics of crystals and structures in the near-surface region
// Ability to select, develop and design industrial network options
// Ability to select and program industrial controllers

CAREER PROSPECTS

// machine- and device engineering enterprises
// electrophysical laboratories
// higher educational institutions
// research and development centers and research and practical laboratories

SPECIALTY

INFOCOMMUNICATION SYSTEMS AND NETWORKS INFORMATION

Combination of knowledge and skills that allow undergraduates to become true professionals in the field of information technology. This is a creation of digital ecosystems, where every action is a new word in technology, revealing the endless possibilities of communication. Graduates are in demand in various companies and organizations where they can apply their knowledge and skills to create and develop new technologies.

EDUCATIONAL PROGRAMME

// Delivery and protection of information
// Cryptographic protection methods in infocommunications
// Management of information communication systems and networks
// Information flow management methods
// Research work
// Technologies for the development of information and communication systems

// Delivery and protection of information
// Cryptographic protection methods in infocommunications
// Management of information communication systems and networks
// Information flow management methods
// Research work
// Technologies for the development of information and communication systems

PROFESSIONAL COMPETENCIES

// Methods of cryptographic protection of information, authorization, accounting, authentication in infocommunications
// Methods of information distribution, management and routing
// Technologies for the design and development of infocommunication systems based on microcontrollers and signal processors
// Development work in the field of information communication systems and networks
// Methods of network interaction and network protection
// Methods of algorithmization, signal processing
// Neural network data processing methods
// Machine learning methods
// Methods of noise-tolerant data encoding

CAREER PROSPECTS

// in the field of design and technical operation of current and future communication networks of various levels, development and implementation of information technologies
// enterprises and organizations of communications, television and radio broadcasting

Undergraduates have the opportunity to work on real projects, develop and create their own devices and systems. It helps to develop creative and critical thinking, the ability to solve complex problems. Here, knowledge is intertwined with innovation, and research becomes the key to new horizons of education. Opportunities for career growth and success in the modern world.

EDUCATIONAL PROGRAMME

// Methodology of pedagogy
// Modern directions of technological education development
// Adaptive didactics
// Innovation management in technology education
// Managing the educational process in a digital environment
// Engineering support of technological education
// Engineering
// Modern production technologies
// Modern technologies and methods of creation and processing of materials
// Innovative approaches in creative design
// Basics of STEAM education
// Maintenance of electrical equipment
// Technologies of creative education in higher education

PROFESSIONAL COMPETENCIES

// Management in the system of technological education
// Research methods in accordance with modern scientific achievements
// Theory and practice of organizing students' creative activities
// Product modeling and design technologies
// Modern production technologies
// Design methods and composition tools for solving professional tasks

CAREER PROSPECTS

// Education (schools, out-of-school educational and training institutions, vocational, specialized secondary and higher educational institutions)
// Business (manufacturing enterprises and enterprises that produce decorative and applied arts, craft workshops, IT-companies)
// Culture (museums, leisure centers, folk art centers).

FACULTY
OF FINANCE
AND ECONOMICS

SPECIALTY

ACCOUNTING, ANALYSIS AND AUDIT

The specialty involves the study of accounting, financial analysis and control methods in an organization in order to ensure effective business management. Students of this specialty study financial reporting, taxation, financial performance analysis, planning and budgeting to make informed management decisions.

EDUCATIONAL PROGRAMME

// Microeconomic and macroeconomic analysis
// Methodological aspects of accounting, analysis and audit
// Contemporary issues in accounting, analysis and audit
// Computer products in information systems for accounting and audit
// Research work
// Accounting and analytical tools and statistical methods in economics
// Accounting and analytical methods for business valuation
// Quantitative analysis methods in business
// State regulation of accounting, reporting, and auditing
// Systems of international accounting and reporting standards
// Managerial accounting in the context of business decision justification
// Financial analysis
// Models of accounting and reporting
// Consolidated financial statements and accounting in holding companies
// Accounting in organizations with foreign investments

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Psychological and pedagogical methods and information and communication technologies
// Analysis of the behavior of economic entities
// Analysis of the features of macroeconomic policy
// Patterns and trends in the development of accounting theory
// Knowledge of accounting and analytical tools in solving problems of accounting, analysis, and audit
// Quantitative and qualitative assessment of the break-even level of a commercial organization
// Database management for solving practical business tasks in conditions of uncertainty
// Knowledge of international financial reporting standards
// Methodologies for managerial accounting of capital, assets, liabilities, revenues, and expenses of economic activities
// Methodological tools for financial analysis
// Variability of accounting methodologies
// Investment accounting methodology
// Methodology for maintaining accounting and preparing reports
// Methodology for conducting accounting and tax accounting for foreign and joint ventures, their representative offices, and branches

CAREER PROSPECTS

// Organizations (enterprises) of all forms of ownership and types of activity
// Audit firms
// State financial control authorities
// State and local government bodies
// Institutions of higher and additional education
// Business

SPECIALTY

BUSINESS ADMINISTRATION

Trains future leaders who are able to effectively manage business processes in a rapidly changing world. The programme is for those who strive for innovation and are ready to introduce new technologies into the business environment. A combination of modern strategies and technologies, where every step is filled with creativity and innovation.

EDUCATIONAL PROGRAMME

// Administrative economics
// Functional fields of management
// Management and organizational behavior
// Competitive strategies in entrepreneurship
// Innovative educational technologies
// Pedagogy and psychology in higher education
// Strategy management
// Information technologies in management
// Strategy marketing
// Planning of investment activities
// Marketing analysis
// Digital business transformation
// Negotiation technologies
// Financial management
// Project management
// Business research methodology
// Risk and crisis management

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Psychological and pedagogical methods; information and communication technologies
// Methods of planning and forecasting the organization activities
// Modern technologies and applied software tools for solving business and management problems
// Financial analysis in the preparation and adoption of management decisions
// Methods of quantitative and qualitative analysis and modeling in solving management problems
// Strategic analysis and planning tools
// Designing the organizational structure and distribution of authority
// Formation of the competitive advantage of the organization
// Methods of evaluation of investment projects and business planning
// Modern concepts of the organization operational activities
// Marketing analysis and audit for the development of marketing plans
// Methods of crisis management and crisis resolution
// Organization of the marketing function in the company

CAREER PROSPECTS

// Public administration
// Education
// Wholesale and retail trade
// Industry
// Financial and insurance activities
// Scientific research and development
// Advertising and market research
// Security activities
// Business

FINANCE, TAXATION AND CREDITS

Financial management and investment are becoming powerful tools for achieving success. Graduates will be capable of analyzing financial indicators, assessing risks, and making informed decisions. Special emphasis is placed on investment management skills, the development of financial strategies, and the application of modern financing methods. Capital management skills are comparable to a painter's skill in producing financial masterpieces.

EDUCATIONAL PROGRAMME

// Modern concepts of finance and credit
// Monetary and credit methods of regulation of the innovative economy
// Management in education
// Innovative processes in financial education
// Research work
// Methodological tools for financial management
// Information and analytical support of financial activities
// Financial planning and budgeting
// Special fields of financial management
// Finance of foreign economic activity
// Strategic financial management
// Optimization of tax solutions
// Financing of investments
// Project financing
// Financial statements
// Social responsibility of business

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Analysis of the behavior of business entities
// Analysis of the features of macroeconomic policy
// Analysis of the interaction of various sectors of the financial market
// Development of innovative solutions to financial and economic problems
// Knowledge of financial instruments and financial planning methods
// Working with financial aggregates
// Processing of data characterizing the financial condition of the organization
// Essence of international credit and financial relations
// Effectiveness evaluation of projects
// Tax planning skills in the organization
// Expertise of investment projects

CAREER PROSPECTS

// State and local government bodies
// Organizations (enterprises) of all forms of ownership and activities
// Banks and insurance companies

JURISPRUDENCE

FACULTY
OF LAW

SPECIALTY

JURISPRUDENCE

Civil, criminal, administrative and international law. Skills in international economic relations and the application of information technology in law. The graduate is an expert in legal norms and innovations at the junction of international treaties with the digital world.

EDUCATIONAL PROGRAMME

// Modern problems and methodology of jurisprudence
// Legislative process
// Legal regulation of e-government
// Transformation of legal activity in the context of digitalization
// Cybercrime countering
// Legal information system
// Judicial system in the digital age
// International commercial law
// Corporate law
// Business litigation: innovative approaches
// International civil procedure
// Mediation and alternative dispute resolution
// Law and digital technologies
// GR management in the digital environment
// Pedagogy and psychology of higher education

PROFESSIONAL COMPETENCIES

// Methods of scientific cognition in research activities
// Knowledge and understanding of the basic doctrines, concepts and theories characterizing state-legal phenomena
// Knowledge of the modern theory and practice of law-making
// Trends in the transformation of the judiciary and law enforcement agencies
// Knowledge of the main categories and basic principles of international civil procedure
// Analysis of the impact of digitalization on human rights and law in general
// Solving complex legal and regulatory issues
// GR management as a tool for interaction between business and the state
// Knowledge of the issues of crime change in the realities of a digital society, modern methods of combating crime in the digital space
// Knowledge of the types of legal systems

КАРЬЕРНЫЕ ПЕРСПЕКТИВЫ / ВОСТРЕБОВАННОСТЬ

// Legal and other divisions of companies working in the field of information technology, intellectual property, media
// Legal and other divisions of companies working in the field of e-commerce
// Legal and other divisions of technology startups
// Public service in the field of digitalization of public administration
// Educational institutions

This specialty is for those who want to become a professional in the field of law. The study of various fields of law, the development of skills in analyzing legislation and the application of legal knowledge in practice. After completing the programme, graduates can work in law firms, government agencies and other areas where lawyers are required.

EDUCATIONAL PROGRAMME

// Contemporary issues and methodology of legal science
// Problems of law enforcement in the criminal law sphere
// Criminal law and criminological characteristics of crimes in the IT sector
// Rhetoric skills of lawyers and judicial speech
// Corporate law
// Management in business entities
// Sources of legal regulation in the digital economy
// Legal regulation of management in the digital economy
// Theory and practice of evidence in criminal proceedings
// Professional ethics and workplace etiquette
// Legal support for the digital economy and business entities
// Legal liability of officials in government authorities
// Creative education technologies in higher school
// Information technologies
// Current issues of access to justice
// Current issues in public service

PROFESSIONAL COMPETENCIES

// Patterns and trends in the development of legal science
// Knowledge of contemporary theory and practice of lawmaking by legislative, executive, and judicial authorities
// Understanding of the mechanisms or implementing international law norms at the international and domestic levels
// Addressing issues related to the implementation and application of international treaties

CAREER PROSPECTS

// Judiciary and justice authorities
// Advocacy and notary services
// Prosecutorial authorities, Internal affairs, Investigative committee, State Forensic Examination Committee
// Customs, tax authorities, banks
// Legal and human resources services of any organizations
// Auditing organizations, real estate agencies, Agencies for state registration and land cadastre, and others
// Educational institutions
